

Documentation

Start here: [LCM_Nav3D_Manual.pdf](#), the complete 118-page user manual. It contains every document listed below, typeset for reading, bookmarked and searchable.

Each document is also available on its own, so you can open just the one you need. Every entry below is numbered with the manual chapter it corresponds to.

New to the plugin? Read [Installation](#), then [Core Concepts](#), then build something with [Your First Flying Agent](#). About forty-five minutes end to end.

Part I: Getting Started

#	Document	What it covers
0 1	Installation	Getting the plugin into your project and proving the install is good
0 2	Core Concepts	What the navigation manager does, and the settings that decide whether it works well
0 3	Your First Flying Agent	A pawn that flies through 3D space to a goal, in your own level
0 4	The Same Agent in StateTree	The StateTree route to identical flight behaviour
0 5	Dynamic Obstacles	Making the world move underneath your agents

Part II: Going Further

#	Document	What it covers
06	Mass Entity Crowds	10,000+ agents pathfound on the GPU through the Mass ECS
07	Tactical EQS in True 3D	Environment queries that score real volume, not a floor plane
08	AI Perception	Stock UE perception wired into volumetric threat tracking and cover
09	Hybrid Recast + LCM Nav3D	Walking agents on Recast and flying agents on the SVO, in one level
10	Nav Links and Area Modifiers	Traversal shortcuts, and regions agents should avoid or prefer
11	The Gameplay Debugger	Reading agent and plugin state live in PIE

Chapter 12: Behaviour Tree stock patterns

Seven jobs the engine already does well, and where an LCM Nav3D node earns its place instead:

Pattern	Document
1	Wait
2	IsAtLocation
3	LookAt
4	TurnInPlace
5	HealthBelow
6	PerceptionRelay
7	MemoryDecay

Part III: Reference

#	Document	What it covers
13	Settings Reference	Every field on the navigation manager, with verified defaults and limits
14	Troubleshooting	Problems in the order people actually hit them
15	Flight and Swim Locomotion	The 6-DOF dynamics layer that turns guidance into believable movement
16	Mass Trait Reference	Every Mass Entity trait, and the one rule you must not break

Part IV: Appendix

#	Document	What it covers
17	API Reference	All 517 reflected classes, functions and properties, generated from the shipping headers

Demo maps

The worked examples referred to throughout live in the plugin's `Content/Maps/` folder. Enable **Show Plugin Content** in the Content Browser to see them.

The index to the LCM Nav3D documentation set.

The complete manual is `LCM_Nav3D_Manual.pdf`, in this folder alongside every other document in the set. Start from `README.pdf`.
